Summary

Computer science senior preparing for PhD research in AI security, focused on LLM red-teaming, jailbreak robustness, and verification of AI computation.

Education

Kean University Union, NJ

Bachelor of Science in Computer Science (Cybersecurity Option); GPA: 3.52 *Expected May 2027*

- Honors & Programs: NSF IUSE Scholar (2025, 2026); CRA UR2PhD; CAHSI Travel Scholar; Dean's List; Upsilon Pi Epsilon; Young Envoys Scholarship.

Technical Skills

Languages: Python, Java, JavaScript, SQL, PHP, PowerShell

Research & Security: LLM benchmarking, adversarial testing, citation checking, OSINT, OWASP LLM Top 10, MITRE ATLAS

Tools: Linux (Ubuntu, Kali), Docker, Git, MySQL, SQLite, Node.js, Arduino/ESP8266, Ollama, OpenAI API

Coursework Exposure: TypeScript, Wireshark, Metasploit, Hashcat, Autopsy

Experience

Cybersecurity Research Intern May 2026 – Present

Kean University Center for Cybersecurity *Union, NJ / Wenzhou and Beijing, China*

- Investigated nonprofit cyber incidents through OSINT for the Non-Profit Cyber Incident Repository, organizing public reports by security impact, industry sector, and attack category.
- Taught 12 lessons on cryptography, programming, and IP addressing at the Port Authority of NY/NJ STEaM Camp to 60 high school students.

Peer Mentor / Code Samurai Jan. 2025 – May 2025; Sep. 2026 – Present

Kean University Department of Computer Science and Technology *Union, NJ*

- Volunteered in Spring 2025 and returned as a paid mentor in Fall 2026, guiding students through Python, SQL, and debugging problems so they can work out the next step themselves.

Secretary 2026

Women in CyberSecurity (WiCyS), Kean University Chapter *Union, NJ*

- Organized a campus talk about the SMART Scholarship route for 15 attendees.

International Youth Delegate Sep. 2025

International Forum "We, the Youth" (IFWY) *New York, NY / Seoul, South Korea*

- Spearheaded project design and scope for SelectSolar, a proposal to divert solar panels from landfills and deliver low-cost, energy-efficient power solutions to educational and non-profit institutions.
- Selected for a fully funded fellowship at Cornell Tech, then voted 1 of 25 North American delegates for the IFWY Final Conference in Seoul, collaborating on international environmental policy and sustainable solutions.

Projects

LLM Red-Team Harness | *Python, SQLite, Ollama* June 2026

- Developed with AI assistance a local pipeline for adversarial prompts, model-judge evaluation, and saved transcripts; preserved the code as a public archive with offline tests.

Research & Presentations

HadAgent Verification Study | *Advisor: Dr. Boyang Li* Sep. 2026 – Present

- Directed questions about intended guarantees and claim boundaries while AI agents formulated, implemented, and ran local tests against a copied HadAgent verifier.
- Interpreted local synthetic-input tests of a score-scale repair and its limits; the repaired copied prototype still accepted a model claim without model execution.
- Disclosed the findings to the authors while distinguishing local prototype behavior from network-wide or deployed impact.

Debate Coach LLM Evaluation | *CRA UR2PhD* Feb. 2026 – Apr. 2026

- Helped fine-tune and evaluate Debate Coach with two teammates; the system was designed to challenge users' arguments rather than simply agree.
- Checked citations with teammates and used an AI-assisted audit to assess whether the coach's arguments relied on verifiable sources.

Adaptive Learning with LLMs | *NSF IUSE Scholars Academy* 2025

- Prepared and checked synthetic tutoring dialogues with Node.js and monitored fine-tuning jobs; presented response comparisons as first author at Great Minds in STEM, without measured learning gains.

Gen Z Housing Demographics | *NSF IUSE Scholars Academy* 2026

- Corrected a county/state aggregation mismatch as sole student author, then presented the weak county-level association at Great Minds in STEM without a causal claim.
